

I am going to be comparing the Creative Commons Attribution ShareAlike International License to the GNU General Public License. The first thing of note, is that the Creative Commons License is generally intended to be used on creative works such as music or writing, whereas the GNU GPL is meant to be used primarily on software and coding projects. They do however both share some features in regards to what the license allows users to do with the works. Both licenses allow for users to modify the work and then even redistribute the modified work under the condition that it shares the same licensing as the original, and that the licensing is always either included with the work or at least a link to the license being used is provided. The GNU license has more stipulations about the distribution of software licensed under it, for example it requires that the source code, or written instructions of how to acquire the source code are included with anything licensed under the General Public License. The GNU GPL also requires that the source code be not only accessible but modifiable and redistributable as well. The Creative Commons license on the other hand makes no such requirements regarding technical aspects such as source code but instead mainly addresses attribution requirements. These attribution requirements typically include the original author's name or pseudonym, the title of the work, a link to the original work, as well as an explanation of the changes made to the work. The CC by SA license is not prohibited for use with software, but makes no specific provisions for software works, it could be used for software related works, such as documentation or educational material, which would fit better with the goals of this license. Overall the GNU GPL

is more suited to addressing software works, as it provides specific and detailed instructions for what is and isn't permitted when distributing and sharing things licensed under it, In contrast the CC by SA license is a broader licenses that can be applied to basically any creative work and mainly focuses on ensuring that the creators are attributed and credited properly. They both share the same rules for some things however, including requiring derivative works to be licensed under the same license as the modified work, which is what the “ShareAlike” part of CC by SA represents.
